

ALLSEASON OPTION A CLOSE PACKAGE

Owned acquisition buildout plus 90-day revenue system operation.

A Chris-facing package for approving the \$5,000 buildout and \$3,000/month operating retainer with scope, scorecard, talk track, production proof, and next-step email.

\$5,000

Website, quote engine, intake, and campaign loop buildout

\$3,000/mo

90-day operating retainer for source quality, speed-to-lead, and CAC discipline

30-day notice

Break clause after the first 90-day proof cycle

Option A One-Page SOW

Engagement

Client: AllSeason Solar / Roofing **Provider:** 2Stack **Offer:** Option A - Owned Acquisition Buildout + Revenue System Operation **Price:** \$5,000 buildout + \$3,000/month operating retainer **Recommended term:** 90-day operating cycle after launch readiness

Objective

Build and operate the first version of AllSeason's owned acquisition system so high-intent roofing and solar demand is captured, routed, handled, and measured with owner-level discipline.

The goal is not simply to launch a better-looking website. The goal is to reduce lead leakage, improve first-touch quality, and give Chris a clean view of which sources deserve more money.

Included Buildout

1. Rebrand-Ready Website MVP

- Standalone modern website built outside the existing WordPress stack.
- Launch brand remains AllSeason.
- Structure supports future rebrand with centralized brand/content controls.
- Core pages:
 - Home
 - Roofing
 - Solar
 - Roof + Solar
 - Warranty / Financing
 - Service Areas
 - About / Proof
 - Contact
 - Roof Quote

2. Native Roof Quote Engine

- ZIP/service-area check.
- Roof size, condition, urgency, and complexity inputs.
- Good / better / best estimate logic:
 - good: \$550/square
 - better: \$650/square
 - best: \$750/square
- Configurable modifiers for urgency, steepness, layers, decking concern, skylights, and solar-readiness interest.
- Contact capture before showing final estimate range.
- Consent language and attribution fields.

- Server-side submit to Supabase lead intake.

3. Revenue Intake and Routing

- Website API route posts to Supabase using private intake key server-side.
- Browser never sees the private key.
- New owned source configured as:
- source name: AllSeason Roof Quote
- source type: owned_website
- exclusive: true
- priority: P0
- queue: roofing_preview_queue
- sequence: roofing_day0_high_intent
- script: roof_quote_widget_opener

4. First Campaign Loop

- Static Meta campaign landing route for Fight The Power .
- Source-specific solar savings/roof-readiness capture logic.
- Day-zero call, SMS, email, and voicemail sequence.
- Rep opener matched to ad context.

5. Tracking and Reporting Foundation

Events to track:

- quote_started
- zip_checked
- quote_step_completed
- contact_submitted
- estimate_shown
- call_clicked
- form_submitted

Initial owner scorecard:

- leads by source;
- speed-to-lead;
- contact rate;
- appointment set rate;
- demo/sit rate;
- sold jobs;
- estimated CAC by source once cost and sales outcome data are available.

Monthly Operating Retainer

The \$3,000/month retainer is for operating the system, not passive maintenance.

Included monthly work:

- campaign and landing page improvement;

- quote flow conversion tuning;
- source-specific script refinement;
- lead routing QA;
- speed-to-lead review;
- tracking and scorecard review;
- monthly owner recommendations:
- scale this;
- fix this;
- cut this.

Timeline

Phase	Timing	Work
Kickoff	Week 1	Access, source map, tracking plan, content inventory
Build Sprint	Weeks 2-3	Website MVP, core pages, quote flow UI
Integration	Week 4	API route, Supabase intake, events, attribution fields
GTM Setup	Week 5	Meta route, scripts, sequences, reporting views
Launch Readiness	Week 6	QA, tracking test, mobile review, handoff
Operating Cycle	Days 1-90 after launch	Improve conversion, routing, scripts, and scorecard decisions

Guarantees

Launch Readiness Guarantee

If 2Stack causes the scoped launch to miss the agreed launch-readiness window, 2Stack continues buildout work at no added buildout fee until the scoped deliverables are launch-ready.

Visibility Guarantee

Chris gets a monthly operating review showing what happened, what was learned, and what 2Stack recommends scaling, fixing, or cutting.

Process Guarantee

P0 owned website leads will have defined routing, context fields, and source-specific scripts. The system will not treat owned quote leads like generic cold leads.

What Is Not Guaranteed

2Stack cannot honestly guarantee ad platform costs, homeowner behavior, financing market changes, sales rep execution, storm demand, Google/Meta policy changes, or a specific closed-job count.

The guarantee is operating discipline, clean implementation, and transparent measurement.

Break Clause

After the first 90-day operating cycle, either side may end the monthly retainer with 30 days written notice.

If the client chooses Option B/build-only, there is no ongoing operating commitment after delivery.

Client Responsibilities

AllSeason provides:

- domain/DNS access as needed;
- website content approvals;
- warranty/legal claim review;
- CRM/dialer access or field mapping support;
- Supabase/lead intake production credentials as needed;
- timely feedback within agreed review windows;
- source cost and sales outcome data for CAC reporting.

Out Of Scope For Initial Build

- full CRM replacement;
- external roof measurement APIs;
- full rebrand/name change execution;
- broad SEO program;
- call center hiring/training beyond scripts and process design;
- paid media budget;
- legal review of warranty, finance, incentive, or savings claims.

Decision

Approve Option A:

\$5,000 buildout
\$3,000/month operating retainer
90-day proof cycle

Next step: kickoff call, access checklist, and build sprint start date.

Option A 90-Day Owner Scorecard

Purpose

This is the scorecard Chris should see during the first 90 days of Option A.

It is designed to answer owner questions:

- Which sources are worth more money?
- Which sources need repair?
- Which sources should be cut?
- Are high-intent leads being contacted fast enough?
- Is the website and quote engine creating better context?
- Are roofing and solar opportunities moving toward profitable jobs?

Monthly Owner Review Format

Each monthly review should end with three decisions:

Decision	Meaning
Scale	Put more money, creative, or operational focus behind this
Fix	Keep testing, but repair the offer, script, landing page, or routing
Cut	Stop buying or reduce spend until economics improve

Top-Level Scorecard

Metric	Target / Question	Month 1	Month 2	Month 3	Decision
Owned website leads	Are owned channels producing real conversations?	TBD	TBD	TBD	TBD
Roof quote starts	Are homeowners engaging with the quote tool?	TBD	TBD	TBD	TBD
Roof quote completions	Is the quote flow converting?	TBD	TBD	TBD	TBD
P0 leads created	Are high-intent leads being routed correctly?	TBD	TBD	TBD	TBD
Median speed-to-first-touch	Are reps moving fast enough?	TBD	TBD	TBD	TBD
Contact rate	Are we reaching the homeowner?	TBD	TBD	TBD	TBD
Appointment set rate	Are first touches converting to appointments?	TBD	TBD	TBD	TBD
Demo/sit rate	Are appointments real?	TBD	TBD	TBD	TBD
Sold jobs	Are sources producing revenue?	TBD	TBD	TBD	TBD
Sold-job CAC	Is the source profitable enough to scale?	TBD	TBD	TBD	TBD

Source Scorecard

Source	Lead Type	Priority	Leads	Contact %	Set %	Demo %	Sold	Spend	CAC	Decision
AllSeason Roof Quote	Owned website	P0	TBD	TBD	TBD	TBD	TBD	TBD	TBD	Scale/Fix/Cut
Fight The Power Meta	Paid social	P0/P1	TBD	TBD	TBD	TBD	TBD	TBD	TBD	Scale/Fix/Cut
Roofing Calculator	Vendor/shared	P0/P1	TBD	TBD	TBD	TBD	TBD	TBD	TBD	Scale/Fix/Cut
Nest Builders	Vendor/shared	P0/P1	TBD	TBD	TBD	TBD	TBD	TBD	TBD	Scale/Fix/Cut
LSA	Paid search/local	P0/P1	TBD	TBD	TBD	TBD	TBD	TBD	TBD	Scale/Fix/Cut
CallRail offline	Radio/print/truck/sign	P1/P2	TBD	TBD	TBD	TBD	TBD	TBD	TBD	Scale/Fix/Cut

Lead Handling SLA

Lead Type	First Touch Target	Required Handling	Escalation
Owned roof quote	0-5 minutes	Preview call + SMS + voicemail if no answer	Manager alert if untouched after 10 minutes
Fight The Power Meta P0	0-5 minutes	SMS + preview call + source-specific opener	Manager alert if untouched after 10 minutes
Vendor high intent	0-5 minutes	Source-specific opener based on vendor path	Manager alert if untouched after 15 minutes
LSA call/form	Immediate / same business hour	Call back, dispute invalid leads, log outcome	Review invalid lead disputes weekly
Aged/recycled	Same day	Lower-pressure sequence	No P0 escalation

Quote Funnel Scorecard

Step	Event	Question	Count	Conversion
Quote start	quote_started	Is the CTA pulling interest?	TBD	100%
ZIP checked	zip_checked	Are visitors inside service area?	TBD	TBD
Roof details completed	quote_step_completed	Are homeowners giving useful context?	TBD	TBD
Contact submitted	contact_submitted	Are they willing to identify themselves?	TBD	TBD
Estimate shown	estimate_shown	Did they finish the flow?	TBD	TBD
Lead accepted	Supabase lead-intake accepted	Did the backend route correctly?	TBD	TBD
Appointment set	CRM disposition	Did the quote create a sales conversation?	TBD	TBD

Campaign Scorecard: Fight The Power

Metric	Month 1	Month 2	Month 3	Notes
Spend	TBD	TBD	TBD	Meta spend only
Landing page visits	TBD	TBD	TBD	From campaign UTM
Form starts	TBD	TBD	TBD	Intent signal
Completed forms	TBD	TBD	TBD	Lead count
P0 qualified leads	TBD	TBD	TBD	Owns home, \$150+ bill, valid ZIP, consent
Contact rate	TBD	TBD	TBD	Measures handling
Appointment set rate	TBD	TBD	TBD	Measures script/offer
Demo/sit rate	TBD	TBD	TBD	Measures quality
Sold jobs	TBD	TBD	TBD	Measures revenue
CAC	TBD	TBD	TBD	Measures scale decision

Month-By-Month Operating Focus

Month 1: Instrument and Prove Flow

Focus:

- confirm tracking fires correctly;
- verify all P0 leads route correctly;
- watch speed-to-lead;
- identify quote flow drop-offs;
- confirm scripts match source context.

Owner decision:

Is the machine capturing and routing demand correctly?

Month 2: Repair Conversion

Focus:

- adjust landing copy and forms;
- tighten day-zero sequence;
- improve rep opener based on objections;
- identify low-quality sources early;
- add proof/warranty elements where prospects stall.

Owner decision:

Which bottleneck is costing the most money?

Month 3: Scale, Fix, Or Cut

Focus:

- compare source economics;
- recommend spend shifts;
- decide whether to expand Meta creative, LSA management, or owned quote traffic;
- decide whether dialer/CRM limitations now justify a tool change.

Owner decision:

What gets more money, what gets fixed, and what stops?

First 90-Day Success Definition

The first 90 days should be considered successful if:

- owned website leads are captured with clean attribution;
- completed roof quotes route to P0 correctly;
- reps have source-specific context before calling;
- speed-to-lead is visible;
- source performance can be reviewed by contact, set, demo, sold, and CAC;
- Chris has enough clarity to make better spend decisions.

The first 90 days do not need to prove every channel. They need to prove that AllSeason now has a system for deciding what deserves scale.

Option A Production Proof Log

Purpose

This log records the production-proof checks completed for the Option A package so Chris can see the system is more than a website mockup.

Current Production URLs

Item	URL
Public site	<code>https://all-season-webpage.vercel.app</code>
Roof quote route	<code>https://all-season-webpage.vercel.app/roof-quote</code>
Fight The Power route	<code>https://all-season-webpage.vercel.app/meta/fight-the-power</code>
Roof quote API	<code>https://all-season-webpage.vercel.app/api/roof-quote</code>
Fight The Power API	<code>https://all-season-webpage.vercel.app/api/solar-savings</code>

Verification Summary

Check	Status	Notes
Next.js tests	Passed	4 test files, 10 tests passed after adding Fight The Power intake.
Next.js build	Passed	Production build includes <code>/api/roof-quote</code> , <code>/api/solar-savings</code> , and <code>/api/website-event</code> .
RevOps hub tests	Passed	2 test files, 9 tests passed after adding Fight The Power P0 routing.
Supabase Edge Function deploy	Passed	<code>lead-intake</code> deployed to version 3 with <code>verify_jwt: false</code> .
Live roof quote lead	Passed	Production request created accepted P0 roofing lead.
Live Fight The Power lead	Passed	Production request created accepted P0 solar lead.
Website event persistence	Blocked	Vercel is missing <code>SUPABASE_SERVICE_ROLE_KEY</code> , so <code>/api/website-event</code> returns <code>stored:false</code> .

Live Roof Quote Test

Field	Value
Test email	production-test+1781630677@2stacksystems.com
Session ID	c80c8a90-cb9f-4505-8968-6093438ae414
Lead ID	6bb749f5-fa65-4a72-88e4-29b16ac423f3
Priority	P0
Route	roofing_preview_queue

Priority	P0
Route	solar_preview_queue
Sequence	solar_day0_high_intent
Script	fight_the_power_opener
Decision reason	meta_fight_power_solar_qualified

Remaining Production Blocker

Add this Vercel environment variable to Production and Development:

SUPABASE_SERVICE_ROLE_KEY

The only local candidate key failed a read-only Supabase REST auth check with `401`, so it was not added to Vercel.

Once the real key is added, rerun:

1. Submit `/api/roof-quote`.
2. Confirm `quote_sessions` has the session row.
3. Confirm `quote_estimates` has the estimate row.
4. Confirm `website_events` has `estimate_shown`.
5. Submit `/api/website-event` directly and confirm it returns `stored:true`.

Operator Readout

The owned acquisition loop is now production-proven for lead creation and routing. The remaining gap is event/session persistence, which is an environment secret issue rather than an application logic issue.

Chris Close-Call Talk Track

Goal Of The Call

Get Chris to agree that Option A is the right first move:

\$5,000 buildout + \$3,000/month operating retainer

The call should feel operator-to-operator. Avoid selling "marketing services." Sell control, speed, margin protection, and a cleaner path back toward a valuable company.

Opening

Chris, the way I would frame this is simple: you do not need another disconnected marketing vendor. You need the first version of an owned revenue system that makes your spend accountable before you scale it again.

The website is part of that, but it is not the whole offer. The real offer is the machine between demand and sold jobs: capture the lead, preserve the context, route it correctly, give the rep the right opener, and show you which sources deserve money.

Confirm The Economic Pain

Ask:

Is this still the right operating rule for roofing: if a \$12K roof starts carrying a \$3K job cost, it does not work?

Then:

That is why I do not want to pitch you more lead volume first. Volume without control just gives you a bigger version of the same problem.

Position Option A

Option A is the version where we build the owned asset and stay in the seat long enough to operate it.

The \$5K gets the system built: the rebrand-ready website, the roof quote engine, the server-side lead intake, the source tracking, and the first campaign route.

The \$3K/month is not maintenance. That is us operating the revenue layer: tightening the quote flow, scripts, routing, landing pages, reporting, and the monthly decisions on what to scale, fix, or cut.

Why Not Build-Only

We can do build-only, but I do not think that is the best business move here.

The value is not just launching a site. The value is the first 90 days after launch, when we learn which sources contact, which ones set, which ones demo, and which ones produce jobs at a cost that makes sense.

If we build it and walk away, you have a better asset. If we build it and operate it, you have a cleaner revenue system.

Why Not Tool Replacement First

I would not start by ripping out LeadMaster, Hatch, CallTools, or whatever dialer you choose.

You already have pieces that can work. The failure point is the handoff. High-intent leads need to come in with context, get routed to the right queue, and be handled like someone who just raised their hand, not someone on a cold list.

Once that layer is working, we will know which tool limitations are real and which ones were process problems.

Core Proof Points To Emphasize

- Chris already knows shared leads are expensive and price-competitive.
- The old in-house handling benchmark was strong: roughly 70% contact and 45% set on high-intent web leads.
- Roofing CAC has to be managed by sold job, not CPL.
- Solar lease commoditization makes trust, roof expertise, and follow-up more important.
- A rebrand-ready owned website increases enterprise value more than another rented lead source.

The Ask

My recommendation is Option A: \$5K to build it, \$3K/month to operate it, and we judge the first 90 days on owner-level numbers.

If after the first 90-day cycle the system is not earning its keep, the break clause is clean: either side can end the retainer with 30 days notice.

If it is working, then we keep tightening the machine and start putting more money behind the sources that prove they can produce profitable jobs.

Close Question

Are you comfortable starting with Option A and making the first 90 days about proof?

If yes:

Great. The next step is kickoff. We will send the access checklist, lock the source map, and start the build sprint.

If hesitation:

Makes sense. Is the concern the buildout, the monthly operating piece, or whether the first 90 days will show enough to justify it?

Objection Handling

"Why not just build the site?"

We can. That is Option B. But the problem you described is not only a site problem. It is source quality, first-touch handling, and attribution. Build-only gives you the asset. Option A gives you the asset plus the operating discipline to prove what it is worth.

"We already have a CRM and follow-up tools."

Good. I am not trying to replace them first. I am trying to make the lead context cleaner before it hits those tools, and make the outcome reporting cleaner after the team works it.

"Can you guarantee leads or sales?"

No one should guarantee that honestly. Platform cost, market behavior, and rep execution are real variables. What we guarantee is the build, the routing logic, the tracking visibility, and the operating cadence. You will know what happened and what decision to make next.

"Why pay monthly?"

Because the first version will not be the final answer. The money is made in the weekly tightening: which ad angle works, which form step drops people, which source sets, which script

gets replies, which lead source should get cut.

"What happens if it does not work?"

After the first 90-day operating cycle, either side can end the retainer with 30 days notice. That gives the system enough time to prove something without locking you into a long-term commitment.

Follow-Up Email To Chris

Subject Options

Option A: owned acquisition system + 90-day proof cycle

AllSeason next step: build the asset, then operate the first 90 days

The revenue system we recommend starting with

Email

Chris,

Appreciate the time and the direct conversation.

The main thing we took from the call is that this should not be treated as a normal website or marketing project. You already know how to buy leads. The issue is making sure the money you spend creates owned demand, gets handled correctly, and shows you which sources actually produce profitable jobs.

Our recommendation is Option A:

- \$5,000 buildout
- \$3,000/month operating retainer
- 90-day proof cycle

That includes the rebrand-ready website, native roof quote engine, secure lead intake, source-specific routing, the first Meta campaign path, day-zero scripting, and the monthly owner scorecard.

The reason we recommend Option A over build-only is simple: the value is not just launching the asset. The value is operating it for the first 90 days so we can see what contacts, what sets, what demos, what sells, and what should be scaled, fixed, or cut.

The break clause is clean. After the first 90-day operating cycle, either side can end the monthly retainer with 30 days notice.

If you are comfortable with that direction, the next step is kickoff. We will send the access checklist, confirm the source map, and start the build sprint.

Best,

Joe + Chris
2Stack

Short Text Follow-Up

Chris, sending over the Option A recap now. The short version: \$5K buildout + \$3K/mo to build the owned acquisition system and operate the first 90-day proof cycle. The goal is source-to-CAC clarity, not just a prettier site.

Internal Close Checklist

Before The Pitch

- ☐ Use latest deck: `allseason-owner-pitch-v3.pptx`
- ☐ Confirm whether buyer in meeting is Chris, Yuna, or both.
- ☐ Confirm 2Stack speaker roles:
- Joe: business/economics, roofing context, close.
- Chris: website, technical system, creative, implementation.
- ☐ Have Option A One-Page SOW ready.
- ☐ Have 90-Day Owner Scorecard ready.
- ☐ Have follow-up email drafted.

Discovery Points To Reconfirm

- ☐ Current monthly lead spend by source.
- ☐ Current roof lead cost and sold-job CAC.
- ☐ Current contact rate and appointment set rate.
- ☐ Current response time for owned/vendor web leads.
- ☐ LeadMaster field/API constraints.
- ☐ Dialer shortlist and current CallTools setup.
- ☐ Hatch reliability concerns and current campaigns.
- ☐ CallRail numbers and offline attribution setup.
- ☐ Website domain plan for `.net`, `.com`, and future rebrand.

Close Questions

Ask these before presenting price:

Do you agree the first fix is control over the lead-to-sale path, not just more lead volume?

Do you want the website treated as an owned acquisition asset instead of a brochure?

If we can show source-to-contact-to-set-to-sale clearly, is that the kind of system you would put more money behind?

Option A Close

Our recommendation is Option A: \$5,000 to build the owned system, \$3,000/month to operate the first 90-day proof cycle.

We are not asking you to commit forever. After the first 90 days, either side can end the retainer with 30 days notice.

The first 90 days are about proof: what gets contacted, what gets set, what demos, what sells, and what should be scaled, fixed, or cut.

Red Lines

Do not promise:

- guaranteed lead volume;
- guaranteed CPL;
- guaranteed closed jobs;
- guaranteed Google/Meta ad costs;
- warranty/legal claims without review;
- immediate CRM replacement;
- full rebrand execution inside Option A unless separately scoped.

Do promise:

- clear build scope;
- secure server-side intake;
- P0 routing for owned quote leads;
- source-specific scripts;
- tracking events;
- monthly owner scorecard;
- transparent recommendations.

Access Checklist After Yes

- ☐ Domain/DNS access.
- ☐ Hosting/Vercel access or approval to create project.
- ☐ Supabase project access and intake key handling.
- ☐ CallRail access.
- ☐ LeadMaster field map/API docs or admin access.
- ☐ Current dialer/Hatch access for audit.
- ☐ Meta Business Manager access.
- ☐ Google Ads/LSA access if included in operating cycle.
- ☐ Brand assets and logo files.
- ☐ Warranty/legal copy source of truth.
- ☐ Service area ZIP list.
- ☐ Roofing price/modifier assumptions.
- ☐ Sales disposition definitions.

First 72 Hours After Close

Timeframe	Action
Day 0	Send kickoff email, invoice/payment link, access checklist
Day 1	Source map and tracking plan
Day 2	Website content lock and quote engine assumptions
Day 3	Build sprint starts

Prepared by 2Stack. This package is intended as an operator-facing close and implementation handoff, not legal advice.
